RightTransitions

PROGRAM

What Is RightTransitions?

It is an alternative that will enhance your current discharge practices. Many acute care providers recognize the value of supervised care transitions provided by trained, reputable providers to safeguard against unnecessary readmissions.

Right at Home is at the forefront of these providers. Our RightTransitions program is structured to work with you, the healthcare continuum, and your patients and their families.

We work to reduce your readmission rates, lower costs associated with readmissions and enhance your reputation for providing quality patient care. Whether you currently have a transitional care program or not, our caregivers can improve your patients' recovery, as well as improve your bottom line.

Our customizable care model includes the right services necessary to help patients transition safely out of your facility, including:

- Follow-up with discharge planners and supporting post-acute care.
- Monitoring and reporting changes in condition.
- Complying with the care plan.
- Preparing nutritious meals.
- Everyday health reminders.
- Coordinating communication between providers.
- Transportation to/from physician appointments.
- Support patient self-management.
- Running errands.
- Keeping homes clean and safe.

A global network where most offices are independently owned and operated.
